
Department of Education Web Site Procedures with WebDAV on a MAC

What is WebDAV?

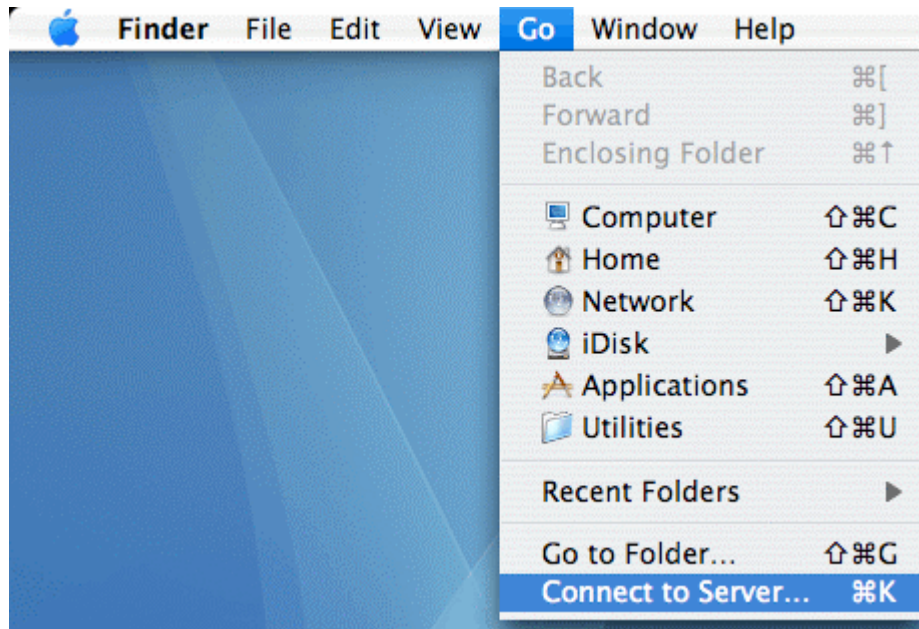

The abbreviation stands for Web-based Distributed Authoring and Versioning. The WebDAV protocol's aim is to make the World Wide Web a readable and writable medium, in line with Tim Berners-Lee's original vision *for the web*. *WebDAV permits web site owners the ability to* create, change and move documents on a web server. This is useful, among other things, for authoring the documents which a web server serves, but can also be used for general web-based file storage that can be accessed from anywhere. Most modern operating systems provide built-in support for WebDAV, making it as easy to use files on a WebDAV server (almost) as if they were stored in a local directory.

Requirements

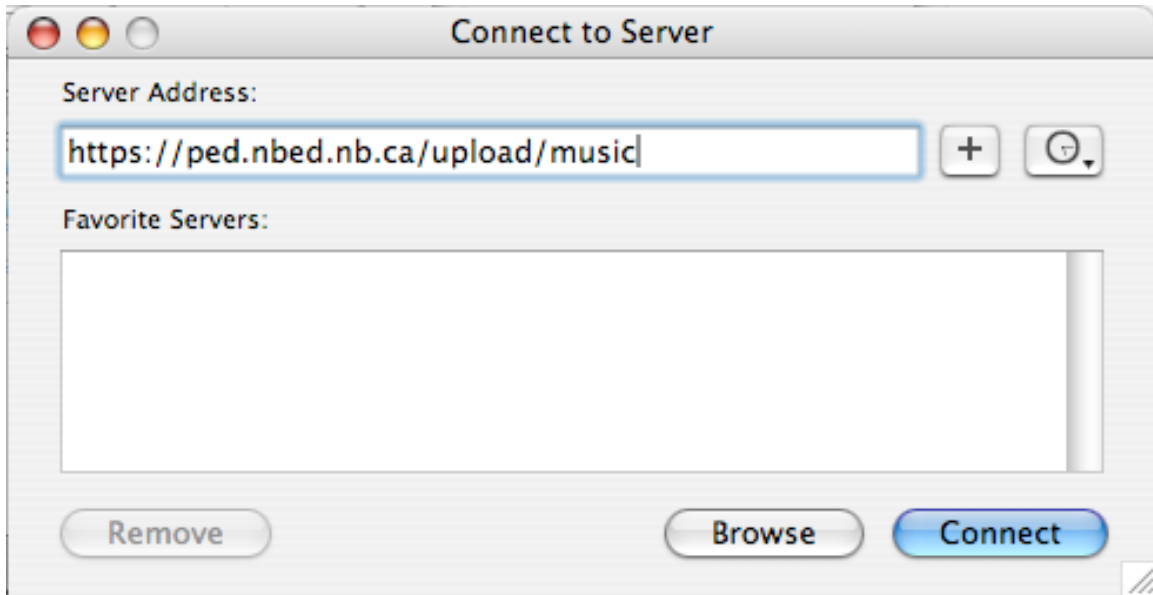

To make a secure WebDAV connection you need to have OS X 10.4 (*Tiger*) or later

To create a WebDAV connection to the site:

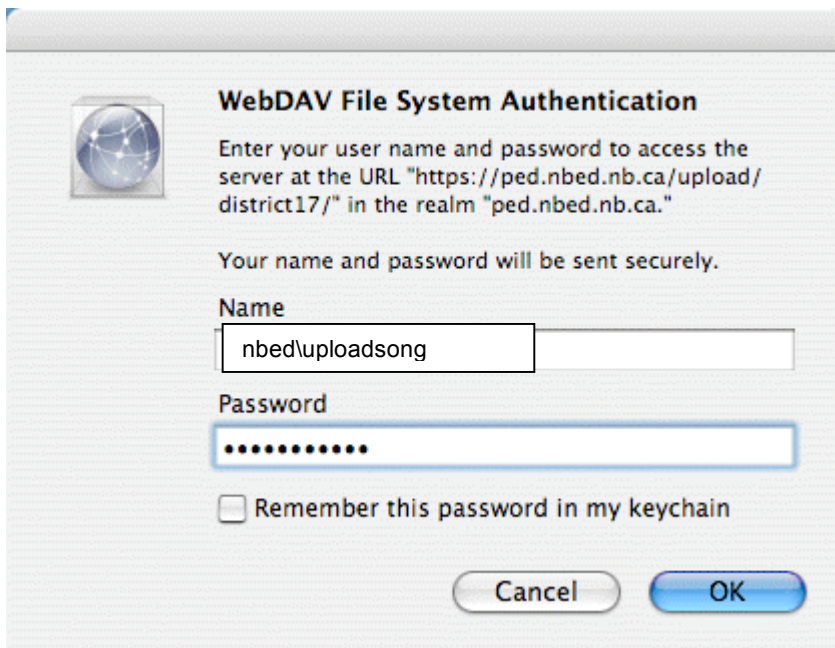

Step 1 – In the top menu Go click on Connect to Server.

Step 2 (see example 2.1 and 2.2 below) – To upload your song and/or video you will need to type <https://ped.nbed.nb.ca/upload/music> for the Server Address. After you have typed the Server Address you can click on the + button on the right of that field to add it to your Favourite Servers. Click on Connect to go to the next step. Below is an example of this window.

Step 3 – You are prompted, please enter *nbed\uploadsong* for name and for **password** enter *Password123\$* to verify that you have access to your Web site and Click **OK** (see image below).

Step 4 – Now that you have been authenticated a new finders window opens and you see all the files on the music folder where you will be able to place your song/video file.
